

Felipe Rodrigues Ascari

Senior Software Engineer · Go & Distributed Systems

Brazil (Remote) | felipeascari@gmail.com | linkedin.com/in/felipe-ascari | felipeascari.dev

SUMMARY

Senior engineer with 15+ years across the full stack, focused on **Go** since 2022 across logistics, Fintech, and EdTech. At McGraw Hill, consolidated pricing rules previously scattered across internal systems, replacing a manual process the commercial team depended on daily. At Mercado Livre, built logistics services under a p99 of 100-200ms with **AWS** and **Kubernetes** across production.

WRITING & OPEN SOURCE

Technical articles on Medium, dev.to, and LinkedIn ([felipeascari.dev](#)) covering **Go internals**, concurrency patterns, and OpenTelemetry instrumentation. Built **cashback-platform**, a Go monorepo issuing ERC-20 cashback tokens on Ethereum with go-ethereum, Solidity, NATS JetStream, and gRPC. Maintains **ai-config**, a public collection of Copilot CLI skills and Claude workflows.

SKILLS

LANGUAGES

Go TypeScript / Node.js Java Solidity SQL

FRONTEND

React Angular AngularJS HTML / CSS

BACKEND

Event-Driven Microservices DDD Clean Architecture gRPC GraphQL Kafka / NATS

CLOUD

AWS (Lambda, Workflow Orchestration, SQS/SNS, ECS/Fargate) Azure Kubernetes Terraform GitHub Actions
Docker

DATA & OPS

PostgreSQL Redis DynamoDB MongoDB Datadog OpenTelemetry New Relic Grafana

AI TOOLING

Copilot CLI (custom skills) Claude MCPs Obsidian / Zettelkasten Graphify

EXPERIENCE

Senior Engineer, McGraw Hill Educational · USA, Remote Sep 2024 - Present

- Consolidated pricing rules from multiple internal sources into a single **Go** API, giving the commercial team one place to manage offer logic instead of coordinating across systems. Built with **DDD** and **Clean Architecture**. Integration and unit tests gate every deploy. Also contributed to the **Angular** admin UI.
- Designed serverless workflows on **AWS** to replace manual financial processes, with **Lambda**, **SQS/SNS**, and event-driven state machines. Built custom **New Relic** dashboards correlating business events with APM throughput and p95/p99 latency. Service handled **2.17M requests in 6 months** at **Apdex 0.99**.
- Built 20+ custom **Copilot CLI** skills that the team uses for code analysis, design review, and implementation, reducing context-switching between AI tools and the codebase. Persistent memory via Obsidian and codebase knowledge graphs via Graphify keep context across sessions.

Senior Engineer, Mercado Livre · Brazil, Remote Jan 2022 - Sep 2024

- Built event-driven **Go** microservices for the **Mercado Envíos** logistics pipeline that shipped roughly **3.7M items per day across LATAM**, under a squad p99 budget of 100-200ms. Ran on **Fury**, MELI's **Kubernetes** platform.
- Operated delivery flows where failures had physical consequences, trucks blocked from picking up packages, distribution centers unable to route. Owned the package-vs-vehicle cost calculation for the daily plan, optimizing carrier contract matching to reduce misallocation. On-call for the shipment pipeline.
- Wrote a **TypeScript** BFF that unified multiple backend calls into a single mobile contract, with **React** touchpoints on the client. Also worked on Mercado Pago's Meli Dólar (MUSD) and Mercado Coin stablecoin flows, double-entry bookkeeping and consistency guarantees for money movement.

Software Architect, Ambev Tech · Brazil, Remote May 2021 - Jan 2022

- Operated fiscal document issuance (CT-e, MDF-e, NF-e) across **AB InBev's** Brazilian distribution network: **89 distribution centers**, **207 third-party distributors**, and roughly **1M points of sale**. A single outage once blocked an entire distribution center, queuing trucks until throughput recovered. Led migration from on-premises to **Microsoft Azure**. On-call for the issuance pipeline.

Software Architect / Senior Developer, Betha Systems · Brazil, On-site Jan 2010 - May 2021

- Migrated fiscal and tax systems serving 850+ municipalities and 3,000+ public agencies across **23 Brazilian states** from J2EE monoliths on **Oracle** and **Sybase** to Spring Boot microservices on **PostgreSQL**, moving millions of records into a multi-tenant cloud architecture. Used **Kafka** to pipeline high-volume data migration. Moved container orchestration from **OpenShift** to **Kubernetes** and operated **AWS** workloads.

EDUCATION

Postgraduate in Software Engineering, IPG, Brazil · 2011-2013

B.Sc. in Information Systems (Honorable Mention), University of Southern Santa Catarina, Brazil · 2006-2009

Technical Degree in Systems Analysis, SATC Technical School, Brazil · 2002-2004

Languages: Portuguese (Native) · English (Professional Working Proficiency) · Spanish (Intermediate)
