# Felipe Rodrigues Ascari

Senior Software Engineer · Go & Distributed Systems

Brazil (Remote) | felipeascari@gmail.com | linkedin.com/in/felipe-ascari | felipeascari.dev

## SUMMARY

Senior engineer with 15+ years building backend systems, the last five focused on **Go** services in Fintech and Crypto, with 5+ years operating **AWS** and **Kubernetes** workloads. At McGraw Hill, led the design of a pricing consolidation service that unified rules previously scattered across internal systems. Before that, built high-volume logistics microservices at Mercado Livre under tight latency budgets. Writes about Go internals and concurrency, and uses AI-assisted workflows for daily engineering work.

## WRITING & OPEN SOURCE

Technical articles on Medium, dev.to, and LinkedIn (felipeascari.dev) covering **Go internals**, concurrency patterns, and OpenTelemetry instrumentation. Built cashback-platform, a Go monorepo issuing ERC-20 cashback tokens on Ethereum with go-ethereum, Solidity, NATS JetStream, and gRPC. Maintains ai-config, a public collection of Copilot CLI skills and Claude workflows.

## SKILLS

| | |
|---|---|
| LANGUAGES | Go · TypeScript / Node.js · Java · Solidity · SQL |
| FRONTEND | React · Angular · AngularJS · HTML / CSS |
| BACKEND | Event-Driven · Microservices · DDD · Clean Architecture · gRPC · GraphQL · Kafka / NATS |
| CLOUD | AWS (Lambda, SQS/SNS, ECS/Fargate) · Azure · Kubernetes · Terraform · GitHub Actions · Docker |
| DATA & OPS | PostgreSQL · Redis · DynamoDB · MongoDB · Datadog · OpenTelemetry · New Relic · Grafana |
| AI TOOLING | Copilot CLI (custom skills) · Claude · MCPs · Obsidian / Zettelkasten · Graphify |

## EXPERIENCE

### Senior Engineer, McGraw Hill Educational · USA, Remote — Sep 2024 - Present

- Led the design and implementation of a **Go** API consolidating pricing rules previously scattered across internal systems. Shaped the domain with **DDD** and **Clean Architecture**, and built the integration and unit test suites that gate the deploy pipeline. Also contributed to the **Angular** admin UI consuming the service.
- Designed serverless workflows on **AWS** (Lambda, SQS, SNS) to replace manual financial processes, and instrumented the services with **New Relic**, making latency and error hotspots observable instead of inferred from logs.
- Authored 20+ custom **Copilot CLI** skills for code analysis, design review, and implementation. Built persistent AI memory with Obsidian (Zettelkasten) and codebase knowledge graphs with Graphify, integrated with Claude and MCPs for daily engineering work.

### Senior Engineer, Mercado Livre · Brazil, Remote — Jan 2022 - Sep 2024

- Built high-volume event-driven **Go** microservices for logistics, operating under the squad's p99 budget of 100-200ms. Cache strategies and hot-path optimization were routine given request volume and dataset sizes.
- Contributed to delivery flows where failures had physical consequences, from trucks unable to pick up packages to distribution centers blocked from routing. Worked on package-vs-vehicle cost calculations for the daily delivery plan, reducing costs from mismatched carrier contracts, with on-call coverage for the shipment pipeline.
- Wrote a **TypeScript** BFF consolidating calls into a single mobile-facing contract with **React** touchpoints on the client, and contributed to Mercado Pago flows around Meli Dolar (MUSD), a cashback stablecoin, working through double-entry bookkeeping and consistency requirements of money movement at scale.

### Software Architect, Ambev Tech · Brazil, Remote — May 2021 - Jan 2022

- Operated CT-e and MDFe fiscal document issuance for thousands of daily transportation events across AB InBev's nationwide distribution network. Provided on-call coverage for the issuance pipeline. A single incident once blocked an entire distribution center, queuing trucks until throughput recovered. Led migration from on-premises infrastructure to **Microsoft Azure**.

### Software Architect / Senior Developer, Betha Systems · Brazil, On-site — Jan 2010 - May 2021

- Led migration of fiscal and tax systems for 850+ municipalities and 3,000+ public agencies from legacy monoliths to Spring Boot microservices on **PostgreSQL**, moving deploy cadence from monthly to daily. Drove infrastructure modernization from **OpenShift** to **Kubernetes**, and operated **AWS** workloads across compute, messaging, and storage. Earlier work covered full-stack **AngularJS** UIs and **Oracle**-backed ERP and financial modules.

## EDUCATION

**Postgraduate in Software Engineering**, IPG, Brazil · 2011-2013

**B.Sc. in Information Systems** (Honorable Mention), University of Southern Santa Catarina, Brazil · 2006-2009

**Technical Degree in Systems Analysis**, SATC Technical School, Brazil · 2002-2004

**Languages**: Portuguese (Native) · **English (Professional Working Proficiency)** · Spanish (Intermediate)
