Felipe Rodrigues Ascari

Senior Software Engineer · Go & Distributed Systems

Brazil (Remote) | felipeascari@gmail.com | linkedin.com/in/felipe-ascari | felipeascari.dev

SUMMARY

Senior engineer with 15+ years across the full stack, focused on **Go** since 2022 across logistics, Fintech, and EdTech. At McGraw Hill, consolidated pricing rules previously scattered across internal systems, replacing a manual process the commercial team depended on daily. At Mercado Livre, built logistics services under a p99 of 100-200ms. Currently operating **AWS** workloads at McGraw Hill, with prior **Kubernetes** experience.

WRITING & OPEN SOURCE

Technical articles on Medium, dev.to, and LinkedIn (felipeascari.dev) covering **Go internals**, concurrency patterns, and OpenTelemetry instrumentation. Built cashback-platform, a Go monorepo issuing ERC-20 cashback tokens on Ethereum with go-ethereum, Solidity, NATS JetStream, and gRPC. Maintains ai-config, a public collection of Copilot CLI skills and Claude workflows.

SKILLS

LANGUAGES	Go · TypeScript / Node.js · Java · Solidity · SQL
FRONTEND	React · Angular · AngularJS · HTML / CSS
BACKEND	Event-Driven · Microservices · DDD · Clean Architecture · gRPC · GraphQL · Kafka / NATS
CLOUD	AWS (Lambda, Step Functions, SQS/SNS, ECS/Fargate) · Azure · Kubernetes · Terraform · GitHub Actions · Docker
DATA & OPS	PostgreSQL · Redis · DynamoDB · MongoDB · Datadog · OpenTelemetry · New Relic · Grafana
AI TOOLING	Copilot CLI (custom skills) · Claude · MCPs · Obsidian / Zettelkasten · Graphify

EXPERIENCE

Senior Engineer, McGraw Hill Educational · USA, Remote — Sep 2024 - Present

- Consolidated pricing rules from multiple internal sources into a single **Go** API, giving the commercial team one place to manage offer logic instead of coordinating across systems. Built with **DDD** and **Clean Architecture**. Integration and unit tests gate every deploy. Also contributed to the **Angular** admin UI.
- Designed serverless workflows on **AWS** (Lambda, Step Functions, SQS, SNS) to replace manual financial processes. Built custom **New Relic** dashboards tracking business-level events (pricing rule changes, offer generation errors) alongside APM. Service runs at Apdex 0.98 with error rate under 0.5%.
- Built 20+ custom **Copilot CLI** skills that the team uses for code analysis, design review, and implementation, reducing context-switching between AI tools and the codebase. Persistent memory via Obsidian and codebase knowledge graphs via Graphify keep context across sessions.

Senior Engineer, Mercado Livre · Brazil, Remote — Jan 2022 - Sep 2024

- Built event-driven **Go** microservices for the logistics pipeline, operating under the squad's p99 budget of 100-200ms. Cache strategies and hot-path optimization were constant given the volume.
- Operated delivery flows where failures had physical consequences, trucks blocked from picking up packages, distribution centers unable to route. Owned the package-vs-vehicle cost calculation for the daily plan, optimizing carrier contract matching to reduce misallocation. On-call for the shipment pipeline.
- Wrote a **TypeScript** BFF that unified multiple backend calls into a single mobile contract, with **React** touchpoints on the client. Also worked on Mercado Pago's Meli Dólar (MUSD) and Mercado Coin stablecoin flows, double-entry bookkeeping and consistency guarantees for money movement.

Software Architect, Ambev Tech · Brazil, Remote — May 2021 - Jan 2022

- Operated fiscal document issuance (CT-e, MDFe) for thousands of daily transportation events across AB InBev's nationwide distribution. A single outage once blocked an entire distribution center, queuing trucks until throughput recovered. Led migration from on-premises to **Microsoft Azure**. On-call for the issuance pipeline.

Software Architect / Senior Developer, Betha Systems · Brazil, On-site — Jan 2010 - May 2021

- Migrated fiscal and tax systems serving 850+ municipalities and 3,000+ public agencies from J2EE monoliths on **Oracle** and **Sybase** to Spring Boot microservices on **PostgreSQL**, moving millions of records from legacy local databases to a multi-tenant cloud architecture. Used **Kafka** to pipeline high-volume data migration across municipal databases of varying sizes. Built **AngularJS** and **JavaScript** frontends that replaced rigid legacy interfaces, giving public servants and citizens a more usable experience for daily tax and fiscal operations. Moved container orchestration from **OpenShift** to **Kubernetes** and operated **AWS** workloads.

EDUCATION

Postgraduate in Software Engineering, IPG, Brazil · 2011-2013

B.Sc. in Information Systems (Honorable Mention), University of Southern Santa Catarina, Brazil · 2006-2009

Technical Degree in Systems Analysis, SATC Technical School, Brazil · 2002-2004

Languages: Portuguese (Native) · **English (Professional Working Proficiency)** · Spanish (Intermediate)
