

Felipe Rodrigues Ascari

Senior Software Engineer · Go & Distributed Systems

Brazil (Remote) | felipeascari@gmail.com | linkedin.com/in/felipe-ascari | felipeascari.dev

SUMMARY

Backend engineer with 15+ years of production experience, focused on **Go** since 2022 at companies processing millions of transactions daily. At **McGraw Hill**, consolidated pricing rules previously scattered across internal systems into a single Go API, giving the commercial team one place to manage offer logic. At **Mercado Livre**, operated LATAM-scale logistics pipelines shipping **3.7M items per day** under a p99 budget of 100-200ms. Distributed systems at scale across fintech, logistics, and edtech.

WRITING & OPEN SOURCE

Technical articles on Medium, dev.to, and LinkedIn ([felipeascari.dev](#)) covering **Go internals**, concurrency patterns, and OpenTelemetry instrumentation. Built **cashback-platform**, a Go monorepo issuing ERC-20 cashback tokens on Ethereum with go-ethereum, Solidity, NATS JetStream, and gRPC. Maintains **ai-config**, a public library of agentic AI workflows and LLM tooling.

SKILLS

LANGUAGES

Go TypeScript / Node.js Java Solidity SQL

FRONTEND

React Angular AngularJS HTML / CSS

BACKEND

Event-Driven Microservices DDD Clean Architecture gRPC GraphQL Kafka / NATS

CLOUD

AWS (Lambda, Step Functions, SQS/SNS, ECS/Fargate) Azure Kubernetes Terraform GitHub Actions Docker

DATA & OPS

PostgreSQL Redis DynamoDB MongoDB Datadog OpenTelemetry New Relic Grafana

AI TOOLING

Agentic AI tooling Claude MCPs Obsidian / Zettelkasten Graphify

EXPERIENCE

Senior Engineer, McGraw Hill Educational · USA, Remote · Sep 2024 - Present

- Consolidated pricing rules from multiple internal sources into a single **Go** API, giving the commercial team one place to manage offer logic instead of coordinating across systems. Built with **DDD** and **Clean Architecture**. Integration and unit tests gate every deploy.
- Designed serverless workflows on **AWS** to replace manual financial processes, with **Lambda**, **Step Functions**, **SQS/SNS**, and event-driven state machines. Built custom **New Relic** dashboards correlating business events with APM throughput and p95/p99 latency. Service handled **2.17M requests in 6 months** at **Apdex 0.99**.
- Built agentic dev tooling that the team uses for code analysis, design review, and implementation, reducing context-switching between AI tools and the codebase. Persistent memory via Obsidian and codebase knowledge graphs keep context across sessions.

Senior Engineer, Mercado Livre · Brazil, Remote · Jan 2022 - Sep 2024

- Built event-driven **Go** microservices for the **Mercado Envíos** logistics pipeline that shipped roughly **3.7M items per day across LATAM**, under a squad p99 budget of 100-200ms. Ran on **Fury**, MELI's **Kubernetes** platform.
- Owned the package-vs-vehicle cost calculation for the daily plan, replacing spreadsheets that could not account for volume and per-carrier vehicle rates. The operation was reserving full trucks when vans or smaller vehicles would do, paying for capacity it never used. Systematic dimensioning of shipment volume against carrier contracts corrected the allocation, eliminating unnecessary reservations and reducing carrier spend. On-call for the shipment pipeline.
- Implemented double-entry bookkeeping and consistency guarantees for **Mercado Pago**'s stablecoin flows (Meli Dólar / MUSD and Mercado Coin), where correctness in money movement was non-negotiable. Also built a **TypeScript** BFF that unified multiple backend calls into a single mobile contract, with **React** touchpoints on the client.

Software Architect, Ambev Tech · Brazil, Remote · May 2021 - Jan 2022

- Operated fiscal document issuance (CT-e, MDF-e, NF-e) across **AB InBev**'s Brazilian distribution network: **89 distribution centers**, **207 third-party distributors**, and roughly **1M points of sale**. A single outage once blocked an entire distribution center, queuing trucks until throughput recovered. Led migration from on-premises to **Microsoft Azure**. On-call for the issuance pipeline.

Software Architect / Senior Developer, Betha Systems · Brazil, On-site · Jan 2010 - May 2021

- Migrated fiscal and tax systems serving 850+ municipalities and 3,000+ public agencies across **23 Brazilian states** from J2EE monoliths on **Oracle** and **Sybase** to Spring Boot microservices on **PostgreSQL**, moving millions of records into a multi-tenant cloud architecture. Used **Kafka** to pipeline high-volume data migration. Moved container orchestration from **OpenShift** to **Kubernetes** and operated **AWS** workloads.

EDUCATION

Postgraduate in Software Engineering, IPG, Brazil · 2011-2013

B.Sc. in Information Systems (Honorable Mention), University of Southern Santa Catarina, Brazil · 2006-2009

Technical Degree in Systems Analysis, SATC Technical School, Brazil · 2002-2004

Languages: Portuguese (Native) · English (Professional Working Proficiency) · Spanish (Intermediate)
